Idea

Coronavirus disease (COVID-19) is an infectious disease caused by a newly discovered coronavirus. At this time, there are no specific vaccines or treatments for COVID-19. However, there are many ongoing clinical trials evaluating potential treatments. Who will continue to provide updated information as soon as clinical findings become available.

Proposed solution

We are going to build a predictive model to **Predict how the epidemic will end**. What will happen in the future, recovery records, infection records, death records … etc. We will use Multilinear Regression for building our model.
